# King Electric Introduces KB PlatinumX BMS & KBP PlatinumX BMS Unit Heaters

## Compatible Commercial Heating w/Optional 7-Day Programmable Smart Controller & Sensors

**Seattle, WA** — On February 17th 2026, King Electric today announced the launch of the new **KB & KBP PlatinumX BMS Unit Heaters**, next-generation commercial heating solutions designed for integration with modern Building Management Systems (BMS). Built on King's trusted KB & KBP platforms, the PlatinumX BMS configuration adds expanded control flexibility and compatibility for light commercial and industrial applications.

PlatinumX BMS heaters are **BMS compatible**, allowing connection to **any standard 5-wire Building Management System or BACnet controller** for centralized control and system integration. Designed for workshops, mechanical rooms, agricultural buildings, storage areas and commercial spaces, PlatinumX BMS heaters deliver reliable, high-output electric heat while supporting coordinated building-level control strategies.

For applications requiring flexible standalone or zone-level control, PlatinumX BMS heaters are also compatible with King's **optional ECO PRO Wireless 7-Day Programmable Controller**. The ECO PRO Controller allows advanced scheduling, precise temperature control, and optimal thermostat placement without additional control wiring, making it ideal for both retrofit and new construction projects.

Additional energy-saving options include **optional Window, Door, and Occupancy Sensors**, which enable automatic temperature setbacks when spaces are unoccupied or when windows or doors are opened. These sensors help reduce energy waste while maintaining comfort and long-term system efficiency.

"KB and KBP PlatinumX BMS heaters give facility managers the flexibility they need to integrate electric heating into a wide range of building control systems," said Dean Wilson, CEO of King Electric Manufacturing Co. "By offering BMS compatibility alongside the optional ECO PRO Controller and sensors, we're delivering a powerful, adaptable heating solution for modern commercial buildings."

The introduction of the KB & KBP PlatinumX BMS unit heaters reinforces King Electric's commitment to delivering American-made, energy-efficient heating solutions designed to meet the evolving needs of connected commercial facilities.

## About King

Since 1958, King Electric has manufactured American Made Smart Heating Solutions, building a legacy of trust and delivering unparalleled reliability.
