

Don't Settle for Basic. Elevate Your Space with PX ComfortCraft®

More Sophisticated

You know what it feels like when you walk into a well-designed building. Features a modern architectural design that makes a bold statement about your style and elevates your space.

7% Quieter

The redesigned interior and subtle tweaks to the whisper quiet squirrel cage blower design reduces the decibel output by 7% compared to the original PAW heater.

22% Less Energy

Designed for 21st Century Living Spaces. Improvements in insulation and building codes has reduced heat loss demand in modern construction. At 1750W max, that's 22% less energy consumption compared to the original PAW.

Freedom of Colors

Elevate your space to match your style. Choose from one of our 4 designer colors, inspired by the architecture around us.

White Dove, Almondine,
Satin Nickel & Oiled Bronze.

Lower Surface Temp

The heatbox was modified to pull more cold air across the element, which increases heat transfer while reducing the outlet surface temperatures. Simply put, more heat in the room and less at the heater.

Cleaner / Easier Install

Because PX ComfortCraft installs after the drywall, no construction debris gets into the heater, ensuring trouble-free operations. Plus the tapered wall can easily install and mounts stud-to-stud which guarantees a level and secure installation.
