Introducing SafeTouch™ Heaters For Assisted Living & Daycare Facilities

To protect high-risk occupants, many states have either implemented code requirements or released recommended guidelines, limiting the surface temperatures allowed on wall heaters installed in assisted living facilities, day care centers, and memory care centers.

SafeTouch heaters are specifically designed to not exceed 120F surface temperature limits, ensuring compliance with safety standards and safe comfort for all.

In short, installing SafeTouch heaters not only safeguards the well-being of patients but also helps business owners fulfill their ethical and legal responsibilities.
