INSTALLATION INSTRUCTIONS

Specifications:
- **Power Supply:** 120VAC/240VAC 50/60Hz
- **Max Range:** 1800W @ 120V or 3600 W @ 240 V
- **Max Range:** 15A Max, Resistive
- **Accuracy:** ±0.1°F (0.1°C)
- **Temperature Control Range:** 41°F-95°F
- **Temperature Adjustment Scale:** 1°F
- **Listing:** cETL us

**WARNING**

READ CAREFULLY - These instructions will help prevent difficulties that might arise during thermostat installation. Studying the instructions first may save considerable time and money later. Observing the following procedures will keep installation time to a minimum. Save these instructions for future use.

**FUNCTIONS AND FEATURES**

This Thermostat has been designed to control fan-forced and radiant line voltage electric heater.

- Dual Voltage (120vac or 240vac)
- 7 day programmable settings
- Touch-Sensitive Buttons
- Blue Backlit Display
- Temperature Lock Feature: Set a Min and Max Temp Limit
- System On/Standby switch

**PRODUCT OVERVIEW**

The ClearTouch K302PE combines user-friendly touch sensitive buttons with a sleek modern design, offering unparalleled user control. It’s highly accurate sensing technology saves up to 28% on heating costs. Energy-Saving Programmable Solution For Providing Highly Accurate Temperature Control For Line Voltage Electric Heaters. It is accurate and sensitive with high reliability and high performance. Program a full 7 day schedule with ease for total room control.

INSTALLATION INSTRUCTIONS

WARNING!

Warning: Turn OFF the power at the circuit breaker before installing. Installation to be performed by a qualified electrician or authorized technician.

Refer to thermostat and heater load specifications before installation of the thermostat to see if it can handle the amp load. The maximum this thermostat can run is 1800W @120V or 3600 W @ 240 V (15A). Install unit in a grounded metal or plastic wall junction box, indoors 4 1/2’ to 5’ above the floor. Avoid any area where it can come in contact with external sources of heat and cold. This includes plumbing pipes, direct sunlight, a T.V. set, lamps, and drafts from a door or window, as this may cause inaccurate temperature readings. The most convenient place is above the light switch. Not for Outdoor use.

WIRING INSTRUCTIONS

Caution: Turn off power at the circuit breaker before performing any work on the electrical connections. None of the electrical connections must be live until the installation has been completed and the housing is closed. Only a qualified electrician or authorized technician are permitted to open the terminal box.

Wiring requires a Phillips screwdriver

1. Disconnect power supply to prevent electrical shock or damage to the product.
2. Run line voltage wiring to the location of thermostat.
3. Use a screwdriver to separate the Display Panel and power board of the thermostat, as shown in Figure 1 and Figure 2.
4. Choose the proper installation location. Installation height is about 4'12” to 5 feet above the floor. For indoor use only.
5. Do not install close to a heat source, such as hot water pipe, heating pipe, wall-mounted light fixture or in direct sunlight.
6. Connect the incoming power wires to Line 1(L) & Line 2(N) wires on the power board, using the provided wire nuts, as shown on figure 3.
7. Connect the heater load wires to the Load 1 & Load 2 wires of the power board, using the connectors, as shown on figure 3.

(Optional) Connection to a Slave Relay (K312RELAY)

If the heating area requires the addition of a Slave Relay (K312RELAY) into terminals 5 & 6 (Relout) on back of the power board to add a zone. See drawing below.

9. Install the power board into the electrical box with the 2 screws provided, and then clip & fasten the front Display Panel into place with the bottom screw.
10. Make sure your K302PE thermostat is COMPLETELY RECESSED into the junction box and flush with the wall. NO WIRES SHOULD BE EXPOSED outside the metal or plastic junction box.

KING ELECTRIC MFG CO - 9131 10TH AVENUE SOUTH - SEATTLE, WA 98108 - PH:206 762 0400 - FAX: 206 763 7738 - www.king-electric.com

Rev. 1.3.18
Safety Information:
- Installation must be carried out by a certified professional electrician.
- Disconnect all power before performing maintenance work to avoid product damage.
- Shocking, dropping or stepping on the product will damage it and void the warranty.
- The thermostat should be kept away from corrosive chemicals.
- Damage to the product could result in a faulty electrical system that may cause fire.

Control Wiring:
- **Setback**: This is an input signal driven by a remote contact. One terminal connects to the internal power source by 10K resistance; another terminal connects to the internal ground. The circuit diagram as shown on the left.
- **Relout**: This is an output allowing the remote control of a series of Slave Relays (K312RELAY). Inside the thermostat is an open drain circuit, driving a 24V relay. The maximum drive current is 30mA. The circuit diagram as shown in the left. This is used to connect to a Slave Relay (K312RELAY) to expand the heating surface. Multiple Slave Relays can be interconnected in a daisy chain, see below:

---

Master / Slave Wiring Diagram

**Dual Voltage**
- 120VAC 60Hz 15A/1800W(NI)
- 240VAC 60Hz 15A/3600W(NI)

**Master Thermostat**—K302PE

**Slave Relay #1**—K312RELAY

**Slave Relay #2**—K312RELAY
ON/OFF Settings

ON: From the OFF status, slide the ON/OFF side switch up to turn the unit on. Time clock, actual probe temperature, working mode and output status will be displayed on the screen.

OFF: From the ON status, slide the ON/OFF switch down to turn the unit off. It will display OFF and all outputs will be open.

Reset

Under OFF mode, press reset button 3sec, then the thermostat will return to factory default. The factory default temperature unit is Fahrenheit and the default time system is 12Hours.

Setting the Time

In the normal working interface, press button for 3sec. to enter into the Time setting interface.

First, “WEEK” is blinking, press or button to set the day of the week;

When finished setting the DAY, press button to switch to HOUR, “HOUR” is blinking, press or button to set the hour;

When finished setting the HOUR, press button to switch to MINUTE, “MINUTE” is blinking, press or button to set the minutes.

When finished setting the MINUTE, press button or wait for 10 sec. without any operation to save the new values and return to the normal interface automatically.
Setting the Control Mode

In the normal control interface, press \( \text{button} \) to enter into the Control Mode settings interface. The control mode will be changed for every press of \( \text{button} \). Press \( \text{button} \) continuously, then all the working modes will cycle.

When the icon \( \text{displays} \) on the screen indicates it’s in Time Period Mode ;

When the icon \( \text{displays} \) on the screen indicates it’s in Comfort Mode ;

When the icon \( \text{displays} \) on the screen indicates it’s in Energy-saving Mode ;

When the icon \( \text{displays} \) on the screen indicates it’s in Vacation Mode ;

When the corresponding icon of working mode is blinking, press \( \text{button} \) to confirm or wait for 10sec. without any operation to save the values and return to the normal working interface automatically.

Setting the Set Temp

In any mode, press \( \text{button} \) or \( \text{button} \) to enter into the Set Temp settings interface of the corresponding mode. The Set Temp is blinking.

Press \( \text{button} \) to decrease the temperature, press \( \text{button} \) to increase the temperature set point.

After enter into the interface of Set Temp settings, press \( \text{button} \) or \( \text{button} \) for 3 sec. to decrease/ increase the temperature continuously.

Once completed, press \( \text{button} \) to confirm changes or wait for 10s without any operation to save the values and return to the normal working interface automatically.

Keypad Lock

In the normal working interface, press \( \text{button} \) and \( \text{button} \) simultaneously to lock the keypad, at the same time the icon \( \text{will} \) display on the screen.

When the keypad is locked, no adjustment is possible. When the icon of Keypad Lock \( \text{displays} \) on the screen, press \( \text{button} \) and \( \text{button} \) simultaneously to unlock the keypad, and the icon \( \text{will} \) disappear from the screen and the keypad is back to its normal state.

Setting the Time Periods (Schedule)

In the normal working interface, press \( \text{button} \) button to enter into the Time Period settings interface. First, the “HOUR” of the first period is blinking.

The blinking item is adjustable, press \( \text{button} \) or \( \text{button} \) button to change the value.

In the setting interface, press \( \text{button} \) button to switch the weekday, the sequence is Monday - Tuesday - Wednesday - Thursday - Friday - Saturday - Sunday - Exit.

In the setting interface, press \( \text{button} \) button to switch the following parameters: HOUR, MINUTE, Set Temp, and Time Period of each day, press \( \text{button} \) continuously, the time period will be switched from the 1st period to the 4th period.

In the setting interface, press \( \text{button} \) button to return to the normal working interface directly, and the new values will be saved.
The default values of time periods are as follow:

<table>
<thead>
<tr>
<th>7 Days</th>
<th>Default Values of the Time Periods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time Period</td>
<td>1</td>
</tr>
<tr>
<td>Start Time</td>
<td>5:00</td>
</tr>
<tr>
<td>Set Temp</td>
<td>20℃ (68°F)</td>
</tr>
</tbody>
</table>

Note: The default start time of the second period of Saturday and Sunday is different from the default start time of Monday to Friday. The default start time of the second period of Saturday and Sunday is 9:00, but the Set Temp is the same.

Output Control

Room Temperature Control Mode

When the icon displays on the screen it indicates the system is in Room Temperature Control Mode, when the icon displays on the screen, indicating the ambient temperature from the built-in probe. When the detected indoor temperature is below the set temperature by -2°C(-4°F), electrical heating will be turned on, and the icon will display on the screen; when the detected indoor temperature is above the set temperature, electrical heating will be turned off, and the icon will disappear from the screen.

Remote Control of Thermostat

When there is a remote control signal input, the Remote icon (bar) blinks; when the detected indoor temperature is below the set temperature by -2°C(-4°F), electrical heating will be turned on, and the icon will display on the screen; meanwhile, the Relout sends the output signals. When the detected indoor temperature is above the set temperature, electrical heating will be turned off, and the icon will disappear, and the Relout turns off the power module output signal. The default set temperature is 16.5℃(61°F) on the remote control mode. Note: Remote signal control signal has the highest priority in the logic sequence.

Sensor Failure

When the sensor fails to work, the error icon EEE will be displayed on the screen. The output relay will open. Heating output will stop. Replace sensor.

Cumulative Heating Time to compute energy consumption

Press button, the cumulative heating time will be displayed on the screen. The cumulative time will reset and restart when press and buttons simultaneously. (Unit: min)
Configuration of User Parameters (Hidden Menu)

When the thermostat is OFF: Press (1) and (2) buttons simultaneously to enter into the setting interface. Default values and options are defined below:

<table>
<thead>
<tr>
<th>NO.</th>
