- 120°F max surface temperature safe to touch case
- Designed for assisted living facilities, daycare centers, memory care centers, or any facility w/ high-risk occupants
- Low density heat output
- Fan-Forced heat
- High mass ceramic heating-core w/ aluminum fins
- Low noise squirrel cage blower
- Capillary tube safety limit
- Heavy duty 18 gauge cabinet
- 208/240/277 & 480V models
- 1 or 3 phase models available
- Available in (5) designer colors
- 5-year limited warranty

The KCF Series Safe Touch Cabinet Heater

The KCF Safe Touch heater is intended for areas that are required to have surface temperatures below 125 degrees F. These areas are typically, day care centers, memory care centers, common areas where wheel chair patients may be placed or anywhere a temperature of an electric heater over 125 degrees could cause someone to accidentally burn themselves over time. Many older care centers have implemented this type of heater replacing the old style high wattage baseboards as it has been enforced by inspectors and required by code to keep their patients safe. Heavy duty front covers and our Ceramic Core heating element makes this a long lasting heater with virtually no maintenance required. Optional: Sub-base for mounting close to the floor, inbuilt thermostat factory or tamperproof thermostat may be installed. Heaters can be ganged together to work on one thermostat if higher output is required. Not for residential use unless the manual reset option is added. Textured powder coated finish, available in (5) designer colors.

Engineering Specifications

Contractor shall supply and install KCC Series cabinet heaters manufactured by King Electrical Mfg. Company. Heaters shall be of the wattage and voltage as indicated on the plans.

Construction: Heaters shall be constructed in 18 gauge galvanized Steel with epoxy powder-coated manufacturer's standard finish. A louvered front cover with intake and outlet grille will protect element area and provide ample air flow to dissipate heated air.

Element: The superior performance comes from the proven technology of the ceramic thermal storage heater core. A 7/8" diameter aluminum tube is filled with a special high density ceramic that stores the thermal energy. The oversized fins (4.875 in²) are made from durable (0.015" thick) high grade aluminum which produces better heat transfer than other elements. The benefit of the technology comes when the thermostat

is turned off and the element continues to radiate heat. It also reduces temperature swings by heating and cooling more evenly. A fired refractory ceramic core with two large diameter Nickel Chromium coils attached with high temperature Nickel connectors and stranded Nickel wire, terminated in a junctionbox.

Controls: A built-in thermal cutout shall automatically shut off the heater in case of overheating. An optional built-in thermostat for temperature control will have a range from 40°- 95°F and be of the high accuracy capillary tube-type. Optional disconnect switches in junctionbox will be provided if necessary.

Cabinet Colors: Epoxy powder coated in pearl white, white dove, almodine, satin nickel & oiled bronze.
